

ECOBURNER

WASTE MANAGEMENT SOLUTIONS

WASTE DISPOSAL PROBLEM ?

One Time Investment to be Free From Waste

ABOUT US

EcoBurner is an innovative company with a clear vision, fully dedicated to delivering high-tech products and services to the public. Our offerings are the result of extensive research conducted both in laboratories and in real-world applications. To uphold our high standards, we employ highly qualified professionals with extensive expertise and experience. Our after-sales service is unmatched.

EcoBurner's mission is to provide customers with top-quality products and services at competitive prices that outpace the competition. Our deep expertise in this field allows us to deliver exceptional service that is prompt, reliable, and cost-efficient. These attributes have positioned us as an environmentally conscious company offering eco-friendly solutions. We guarantee the timely delivery of our products, backed by reliable after-sales service.

OUR PRODUCTS

SOLID WASTE INCINERATORS

Our Incinerator Solutions:

Smokeless Diesel Incinerator – Double Chamber

A high-performance system designed for safe and eco-friendly disposal of medical, animal, and industrial waste. Operates on diesel and electricity, ensuring complete combustion with zero smoke.

- * Double-chamber design with 1300°C auto-cutoff
- * Diesel burner with electric control panel
- * Ideal for hospitals, clinics, and factories
- * Zero carbon emission | PCB-approved

Solid Waste Incinerator Plant

Our Incinerators offer a revolutionary, eco-friendly waste disposal solution that operates without electricity, fuel, or gas—using only atmospheric oxygen to convert solid waste into harmless ash.

Compact design. User-friendly operation, and models ranging from 10 to 300 kg/hour.

Suits homes, commercial space, hospitals, apartments, industries, factories, institutions etc.

Handling 70% dry and 30% wet waste, it includes a built-in water

Oxygen-Fed Waste Furnace System

Advanced waste combustion unit designed to operate exclusively with oxygen-assisted technology for faster and cleaner burning. Ideal for diaper, sanitary napkin pads, dry waste, paper and agricultural residue.

- *High-temperature burn with controlled oxygen injection
- *Maximum efficiency
- *Compact design | Low maintenance
- *Ideal for Residential Homes.

ECO-NAPKIN INCINERATORS

The Napkin Incinerator offers an eco-friendly solution for disposing of sanitary napkins by converting them into harmless ash. Engineered for safety and hygiene, it enables the easy and effective disposal of all types of sanitary napkins. This electrically powered device ensures discreet, sanitary handling, allowing users to dispose of used napkins without discomfort.

ECO FOOD WASTE DISPOSER

High-Efficiency, Strong Performance Our food waste disposer quickly shreds all types of food waste—bones, eggshells, meat, vegetables, and more—into small particles that easily pass through the drain.

ECO FOOD WASTE DISPOSER FEATURES

- *Continuous feed capability
- *Powerful grinding: 2800 RPM, Up to 1.25 HP, PM motor
- *Compact, space-saving design
- *Quiet operation with soundproofing
- *Large grinding chamber with durable, corrosion-resistant steel
- *Easy assembly with removable splash shield
- *Power cord included
- *CE/CB safety certified

ECO-BIN

India's first multilayer fully aerobic compost bin

- *Indoor and outdoor design.
- *After a bin is full, waste turns into compost within 30–35 days.
- *Largest waste collection product among aerobic bins (87 liter capacity).

This 87-liter, 9.4 kg PPCP cylindrical bin features a leachate recovery system, odor control, 15,000-hold aerobic capacity, multilayer design, filter plate, low-EC cover, 10L/kg compost inoculum medium, and effective water retention.

BIOGAS

A floating biogas system efficiently converts organic waste like agricultural and food waste into biogas. Anchored to a pier or shore, the platform holds a digester tank and allows easy maintenance. Made from durable, corrosion-resistant materials, it offers a long lifespan and customizable capacity. The generated biogas can be used for power, heating, and cooking.
